Unleashing the Power of
Software: Revolutionizing
Factories for Future
Success

What is more expensive?

Overall Equipment Effectiveness

(Availability x Performance x Quality)

Aros electronics AB

Minimized setup effort through efficient planning:

- Import production orders straight from the ERP system
- Automatic clustering of products for optimized line balancing
- One complete side with constant tables
- Results are immediately available in the preparation area
- Material transactions reduced by 60%

KPI improvements at other ASM customers

**Performance
improvements**

**Improvements in
line availability**

**Reduction in
material inventories**

Zero downtime during New Product Introductions (NPIs)

- Offline generation of printing and placement programs
- Virtual printing and placement before production
- Automatic transfer of programs to the line
- Expert system for autonomous process optimization

KPI improvements at other ASM customers

Reduction in design
and optimization costs

Reduction in
setup times

Reduction in
material costs

Stabilize the print process to maximize throughput

- DFM HealthCheck before production starts
- Recommended parameters stabilize the process
- Automatic offset correction and wipe cycle optimization
- Autonomous DOE's to improve results
- SMT line is four times faster than before
- 90% yield improvement

KPI improvements at other ASM customers

**Reduction in
operator assists**

**Increases in
yield**

**Increase
in throughput**

Aros electronics AB

Reduce actions on the line to maximize line utilization

- Board ID's with automatic program download
- Expert systems stabilize the print process
- Dual lane configuration for batch size one production
- Line output increased by 200% (same line configuration)
- Reduction of line staff from 9 to 3 operators per shift

KPI improvements at other ASM customers

**Increase in
productivity**

**Increase in line
utilization**

**Increase
in quality**

Highly efficient setup preparations process

- One operator handles offline setups for 3 SMT lines
- LEDs and target track guidance for fast and easy setup preparation
- Significantly reduced material transactions
- 30% time savings when moving materials to/from storage
- 30% space savings thanks to automatic storage systems
- Twice as fast in the setup preparation area

**Reduction in material
movements**

**Reduction in
storage space**

**Reduction in
setup time**

VELANKANI

Increase transparency to optimize material flow

- Transparent, paperless material management
- Optimized material flow with automated line side stock
- Reduction of material-related line stops and setup errors
- Operators per line reduced from 5 to 3 (target is 1)
- 70% increase in throughput (same line configuration)
- 1,300 spliced reels per shift

KPI improvements at other ASM customers

**Reduction in material
procurement effort**

**Less
line downtime**

**Reduction in
material inventories**

ASM

Increase productivity with real time monitoring of production data

- Monitors above the line provide guidance for the operators
- Digital documents at all workstations, always up-to-date
- Live display/drill-down of KPIs on factory monitors
- Producing twice as many products with 10% more throughput (same line configuration and staff)

KPI improvements at other ASM customers

20%

Increase in
productivity

30%

Increase in
equipment utilization

17%

Reduction in
material inventories

Comprehensive automation through factory integration

- Two highly automated SMT lines with a downstream robot-supported line for final assembly, testing and packaging
- All equipment is fully integrated and controlled by CIG cloud
- Line staff reduced from 63 to 13 operators per shift
- First-pass yield improved by 2%
- Lead time reduced from 5 to 2 days

Reduction in
operator assists

Increases
in yield

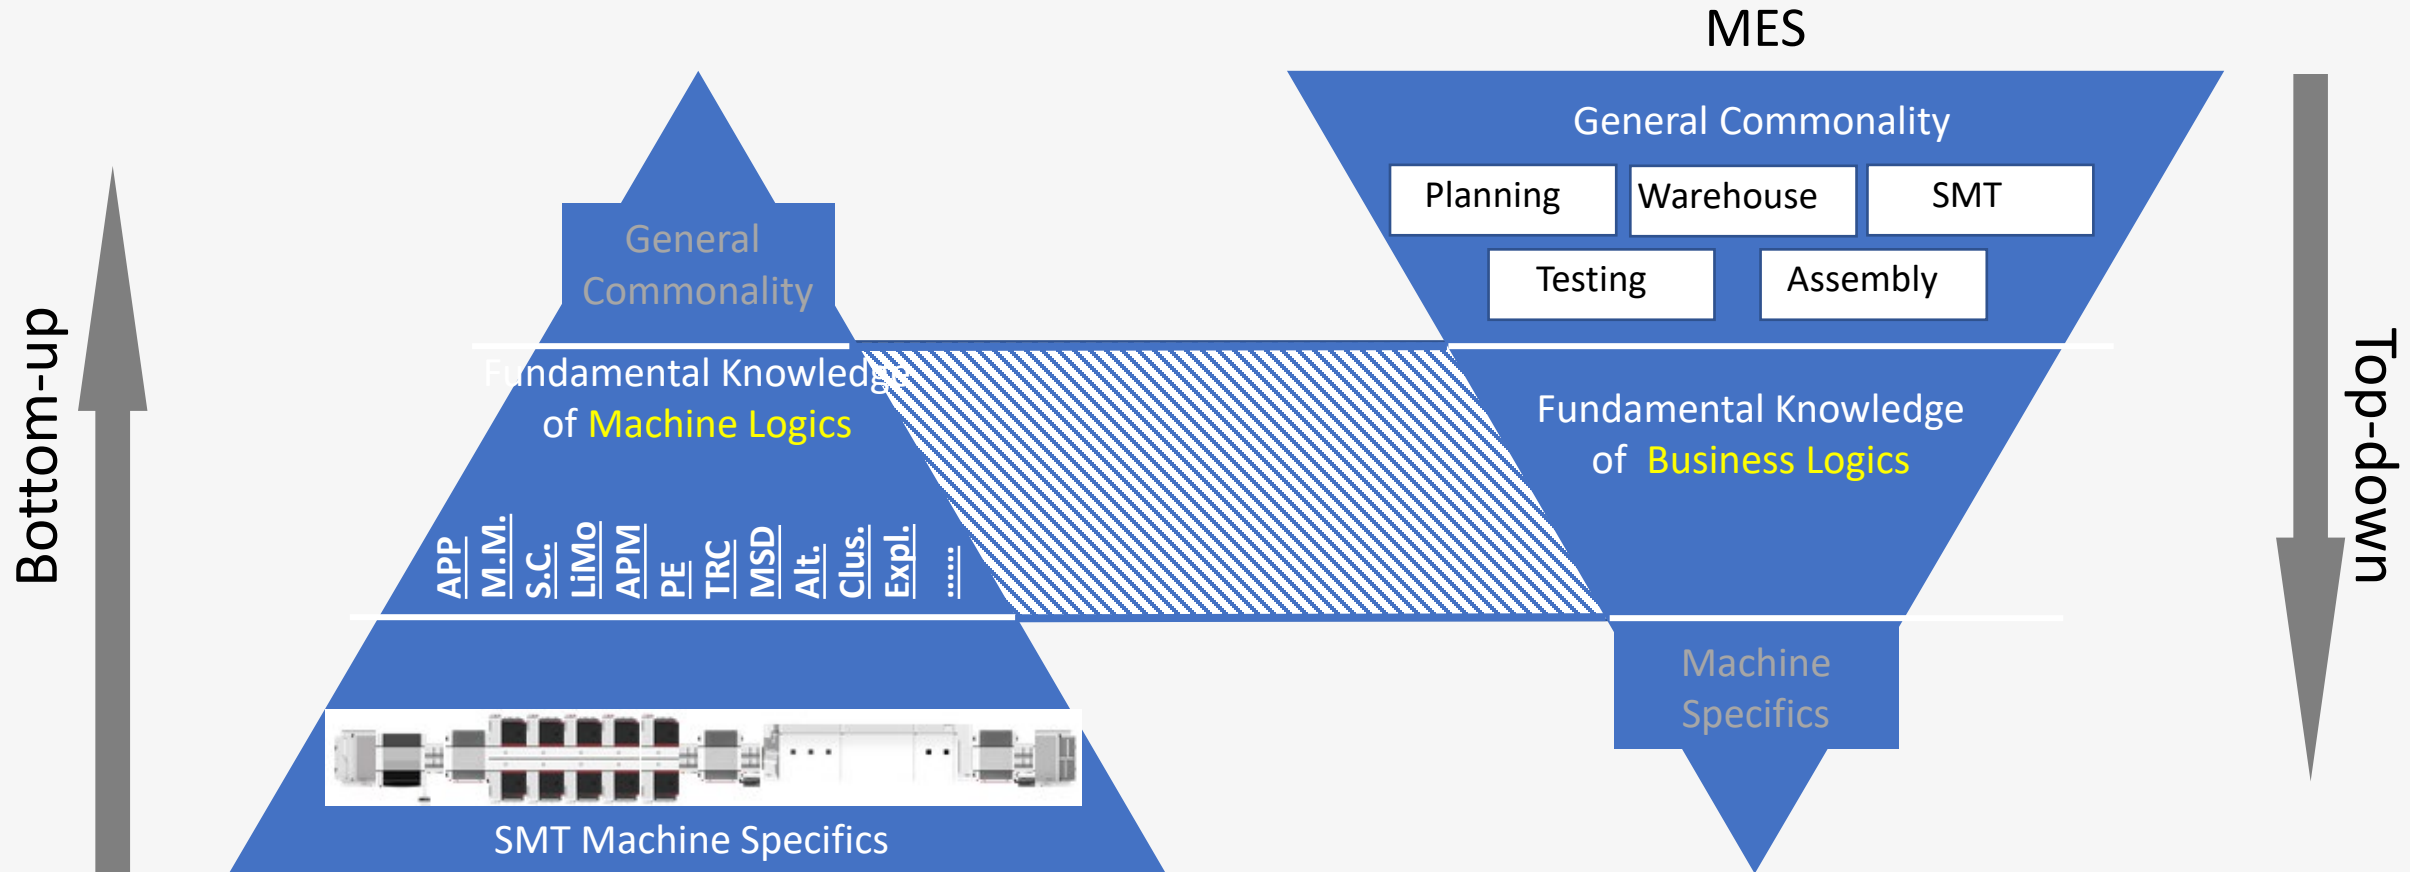

Reduction in
lead time

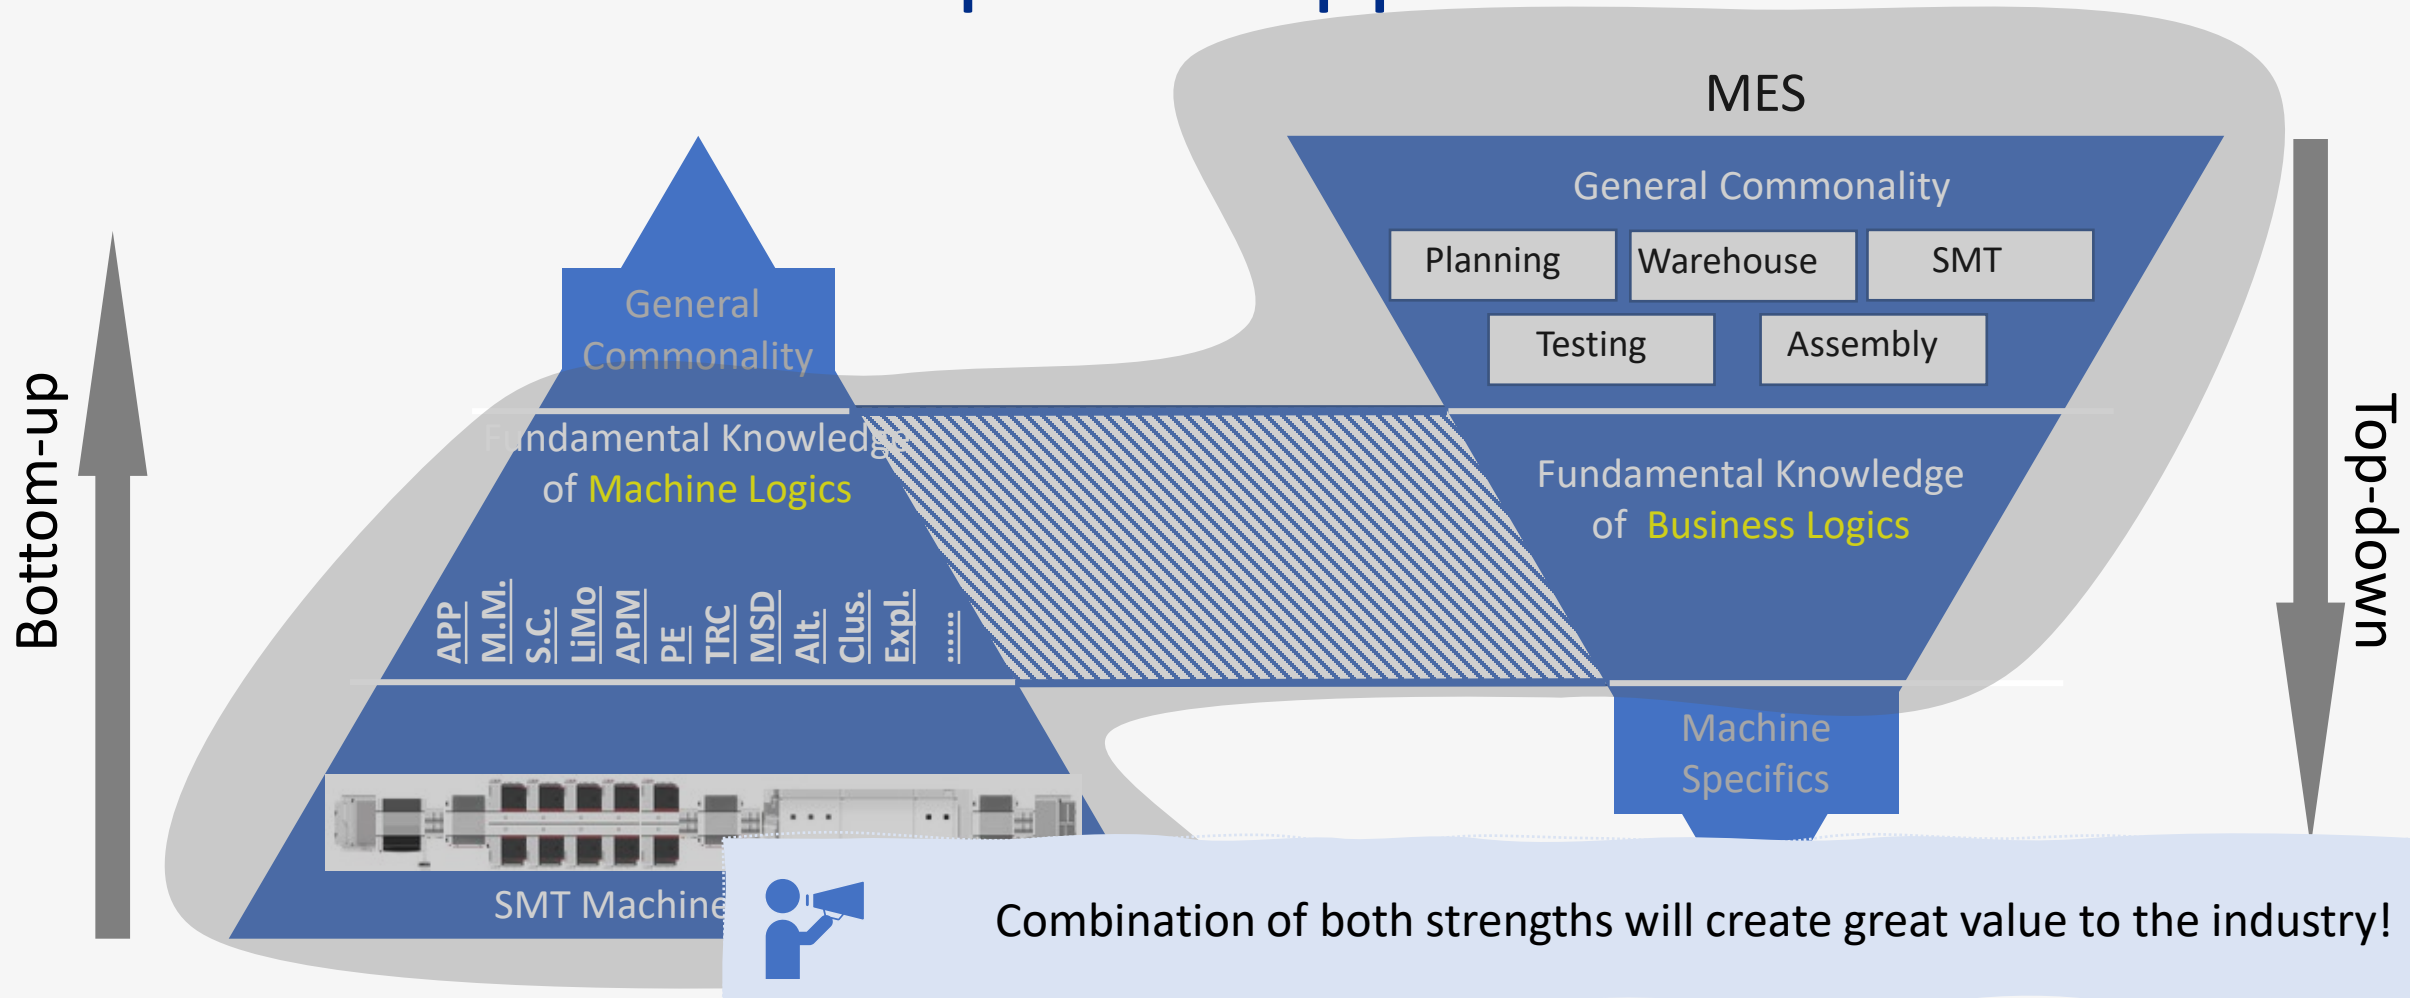

The integrated smart factory
